

5.1.25. QUALIFICATION OF INSERVICE INSPECTIONS IN FINLAND

Sillanpää J., Packalén T., Ukkonen P.,
Inspecta Sertifiointi Oy, Espoo, Finland

The Finnish qualification system for in-service inspections was created few years ago. The system is based on ENIQ documents but it is modified to suit for Finnish national needs. The system is described in national guidelines (SP-guidelines). Licensees have a total responsibility for inspection qualification and their have nominated organisations and people for enforcing the system.

The structure of system and qualification practices will be presented. Several qualifications have been made in accordance with this system and also some qualification cases will be gone through. Difficulties and good aspects of the system and lessons learned will be discussed.
